

June 30, 2020

We were having an issue maintaining the proper split from our HVAC system at one of our in-patient units here at Hospice of Marion County. We called All American AC & Electric and they promptly came out and did a full duct inspection on the facility. After the inspection it was determined that using the Aeroseal product would be the best solution. All of their staff were friendly, knowledgeable and efficient during the job. After completing the job the leakage substantially went down by an average of 93% for both the supply and return side. They supplied reports for each system and communicated with us during the whole process. I would highly recommend All American AC & Electric as they did a great job in a timely manner.

If you have any questions about their work or the efficiency of the Aeroseal product please don't hesitate to call me.
